

Delivers the ultimate in walk-behind comfort and ease of operation.

- ▶ System's natural positioning of hands, arms and back ensures greater comfort and enhanced productivity over the course of a typical workday.
- ▶ Innovative neutral lock system disengages and locks with incredible ease.
- ▶ Cushioned handles and drive levers optimize comfort and reduce fatigue from mower vibration.
- ▶ Unique handle design enables operator to simply hold back on drive handles and use machine's forward drive power to elevate front of deck over curbs.
- ▶ Operational pressure points are greatly reduced since the energy required for the steering controls is more evenly distributed throughout the entire hand.
- ▶ ECS handle positioning is more user-friendly when operating Exmark sulkies.
- ▶ Topside and inward positioning of the controls keeps the operator's hands farther away from obstacles, creating a "safety zone" that helps to protect hands from injury.

"The ECS is everything Exmark says it is—it's easier on my hands and wrists, as well as my shoulders and forearms. My guys who have been running pistol grips loved the ECS right away."
