## SB, 323, 325, 326, Guard – trimmer head, S35 and T35, 2003-02

Before using the new S35 and T35 trimmer heads a protective washer must be fitted between the driver and the trimmer head. See diagram. The protective washer acts as a heat shield. When grass and dirt collect between the gear housing and the driver it leads to increased friction, and the temperature may get high enough to melt the plastic in the trimmer head.

The washer will be supplied with those machines that include the S35 or T35.

In 2003 we will introduce a new bevel gear for the 300 series with a driver that is considerably larger in diameter. This gear unit has a protective cup that prevents grass and dirt from collecting between the driver and gear housing. The protective washer will not be needed then.

New part no.	Description	Excl. part no.	Remark
