

SB, 123 C, 123 L, 123 LD, Clutch cover, 2004-02

The model 123 is fitted with a clutch cover made from composite material as standard equipment.

Because of delivery problems we have been forced to use a clutch cover made from aluminium for a while. The aluminium clutch cover is the same as that used on other trimmer models 323, 325 and 326.

The parts list shows a clutch cover made of composite, and this may therefore differ from the part that is fitted to some machines.

The clutch covers are fully interchangeable and there is no need to change any other parts.

A parts list diagram of the aluminium clutch cover is shown below.
