STARTER DEVICE

In order to obtain a better bearing surface for the pulley, a new starter assembly is introduced. The change involves an increase of the center post diameter from 10 mm to 14 mm. Therefore this change also requires a new pulley and a new recoil spring.

New parts:

501 81 00-02	Starter compl.	replaces 501 81 00-01
501 81 01-02	Starter housing	replaces 501 81 01-01

PLEASE NOTE! If you order an old starter housing 501 81 01-01, your order will automatically be changed to the new starter compl. 501 81 00-02.

503 10 24-01	Pulley	The old pulley 501 52 07-01 remains as a spare part
501 52 04-02	Recoil spring	The old spring 501 52 04-01 remains as a spare part
503 23 43-02	Washer	The old washer 503 23 41-01 remains as a spare part.

The new versions of pulley, recoil spring and washer cannot be used in the starter of the old type. A new starter compl. can of course be used on old saws.

This change is introduced in our production from engine No.:
 181 SE 5101101
 181 SG 5100043
