

Model 232/235

New pulley attachment

The starter unit housing is now made from a new type of plastic. This increases the strength of the starter housing, especially in hot and humid climates. The split stud previously fitted to the pulley can no longer be used because of the increased stiffness of the plastic. Instead we now use the traditional method of attaching the pulley, with a bolt and washer through the pulley stud.

NOTE! The old starter unit housing is no longer available as a spare part. The nut and washer must be ordered when replacing an old starter housing.

New Ref. No.	Description	Excl. Ref. No.	Remark
502 19 63-01	Starter housing	502 21 08-01	E
503 21 06-16	Bolt		
503 23 00-35	Washer		

E = Exl. ref. no. No longer available as spare part.
