Model PS 50/250 PS

Service tool

In order to loosen the clutch drum from the hydraulic pump shaft, we have introduced an allen key with 1/2" square drive for use with standard extension bars and ratchet handle.

The allen key is available in two sizes, one 4 mm for the PS 50 and one 6 mm for the 250 PS.

New Ref. No.	Description
502 52 13-01	4 mm allen key with 1/2" square drive
502 52 14-01	6 mm allen key with 1/2" square drive

The tools will be available during January 1994.

When assembling the clutch drum we recommend to use some kind of antilocking paste on the contact surfaces between the clutch drum and the pump shaft. Anti-locking paste is easy to buy from any kind of larger lubricant dealer.
