Model 3120

Flywheel

An ignition system with a lower speed is fitted to the engine unit used on the Railtech fixture. This system requires another ignition timing setting. The flywheel has therefore be equipped with double keyways.

The keyway marked "2" is used on engine units used on Railtech.

The unmarked keyway is used on chain saws.

Ignition system

The engine unit used on Railtech requires a lower speed than a chain saw, therefore an ignition system equipped with a governor is fitted. The ignition system is limited to a maximum speed of 10,500 rpm.
