## Model 235 - 240/245 - 250 - 265

### Trimmer guard

A larger, improved trimmer guard has been developed for the larger brush cutters. The guard fits mitre gear units with the mounting bracket parallel to the ground. The distance between the output shaft of the mitre gear unit and the edge of the trimmer guard is larger than on the earlier guard. The new guard accepts a line diameter of 500 mm compared to the previous 420 mm.

Brought into production in January.
